## Education

<b>New York City, NY</b>	<b>New York Institute of Technology</b>	<b>2018 – Exp. May 2022</b>
<ul style="list-style-type: none"><li>• <b>Major:</b> Computer Science, B.S</li><li>• <b>Candidate for Accelerated Master Program:</b> Data Science, M.S</li><li>• <b>Relevant Coursework:</b> Data Structure &amp; Algorithm, Operating System, Information Retrieval, Introduction to Big Data</li><li>• <b>Involvement:</b> Tech Lead, Developer Student Club</li></ul>		

## Employment

<b>Full-Stack Web Developer, Intern</b>	<b>SkyMobile Inc (startup)</b>	<b>Aug 2019 – Mar 2020</b>
<ul style="list-style-type: none"><li>• Improved website SQL injection vulnerabilities by implementing server-side script through PHP OOP</li><li>• Implemented secure payment system for online shopping for 200+ clients across NYC by utilizing Stripe API</li><li>• Reduced website latency by 10% by configuring DNS records and intergrading with Cloudflare DNS</li><li>• Redesigned 1k+ records relational database based on business needs</li><li>• Leveraged knowledge in Git, Bootstrap UI, jQuery, Apache Server, MySQL, programmed in PHP using WebStorm IDE, HTML5, CSS3, Ajax, jQuery, Apache JMeter, cPanel and structured project in MVC</li></ul>		
<b>Full-Stack Web Developer, Vol</b>	<b>The Artists Forum Inc</b>	<b>May 2019 – Sep 2019</b>
<ul style="list-style-type: none"><li>• Led a team of two developers to redesign existing website that has 1k+ clients for cross device responsive</li><li>• Transformed all existing server data to a new server, and reconfigured server production environment</li><li>• Implemented email system for administrator and web master by utilizing PHPMailer and SocketLab API</li><li>• Reduced website latency by 12% by configuring DNS records and intergrading with Cloudflare DNS</li><li>• Leveraged knowledge in Git, Bootstrap UI, Apache Server, programmed in PHP using WebStorm IDE, HTML5, CSS3, Ajax, jQuery, Apache JMeter, cPanel, and structured project in MVC</li></ul>		

## Technical Projects

**Personal Website:** [879099766.github.io](https://879099766.github.io) (for additional information and projects)

### Cross-Platform Scholarship Recommendation App

- Created a cross-platform app using React Native and Python that allows clients to easily create their profile and get recommended scholarships
- Implemented web-scraping for scraping 2.7m scholarship data by using selenium with real-time login
- Designed RESTful API backend server enabling integration of React Native and recommendation model
- Utilized Google Authentication and Firestore API to build user role control module
- Configured project production environment and deployed recommendation model, RESTful API, and web-scraping application in AWS EC2
- Utilized: React Native, Git, Python, JavaScript, Firestore, Selenium, AWS EC2, Flask, RESTful

### Big Data: MR Movie

- Implemented a movie recommendation model using Cosine Similarity and Spark through the user ratings
- Analyzed and interpreted recommendation model result by comparing different threshold and co-occurrence threshold value
- Utilized: Git, Python, Apache Spark, Hortonworks Sandbox, shell script, numpy

### Linear Regression: Airbnb Open Data (NYC)

- Built linear regression models for Airbnb price prediction by computing all or without all other features
- Created an interaction density map for the data visualization and analysis through Folium
- Established feature correlational matrix and importance graph for the data preprocessing
- Evaluated and interpreted models' prediction result with an MAE of 39%, R2 score of 41%, and RMSE
- Utilized: Git, Python, scikit-learn, linear regression, Folium, seaborn, Jupyter Notebook, Scipy, pandas, numpy, matplotlib, RapidMiner Studio

### Autonomous RC Car + Virtual Driving

- Utilized PCA servo driver and Raspberry Pi to control RC car steering speed by integrating Donkey Car API
- Showcased the project and result at NYIT Ventures' Pitch Contest to faculty and students
- Collected image data by remotely controlling RC car by wirelessly displaying and operating the camera FOV and direction
- Trained a supervised classification CNN autopilot model with 11 layers by using image data with Keras for generating hierarchical file that contains steering and throttle value
- Utilized: PCA 9685 Driver, Raspberry Pi, Arduino, Python, Keras, TensorFlow, Donkey Car, Flask, 3D Printer

## Skills

**Software:** Java, Python, SQL, PHP, PySpark, Hadoop, selenium, AWS EC2, Git, React Native, MySQL, Firebase
